Landscape Research
Technical Feasibility - Validate
Build Vision / Pitch Deck
Start Investment Search
Hire First Engineers
Seed Investment Package
Patent Process - Start
Prototype v1.0 - Showcase
Prototype - Sound Design via Quad Redesign
Prototype - Obstacle Avoidance via AI
Prototype - Product via Hardware Integration
Prototype - Autonomous Navigation + Docking
Prototype v2.0 - First Fully Integrated Flight
Expand Team - 100% Increase
Build Cross-Platform Application
Manufacturer Relationship [Asia] - Prototype v3.0
Computer Vision Simulation Optimization
Software + Hardware Integration - v3.0
Alexa Voice Command Skill Building
Sound Design Prototypes
Application Ready w/ Product forDemo
Brand Development Strategies - Begin
Industrial Design - Finalize
DFA / DFM - Begin Cycle
Series A Fundraising
First Viable Product - From Asia Team
Build VR Onboarding Experience
Finalized Cross-Platform App
Marketing Material Launch

Team Build

Human mesh networks.

Three capabilities we can use to identify and develop creative business development:

Speed
Does your work accelerate the design process? Do you seek out opportunities to create tools that make collaboration more efficient, or intentionally introduce creative friction?

Experimentation
Do you try to demonstrate your ideas as a means of talking about them? Do you explore technologies and ideas that could change the way we collaborate or how the business operates?

Connection
Can you speak the language of design and engineering, moving fluidly between them? Does your work facilitate design and engineering to work together seamlessly?

Three capabilities we can use to identify and develop creative technologists:
