

TRAINING

Vision

*We need a new exploratory human-machine system.
A generative design process, that completely rethinks the way we design today.
A participatory interplay of intelligence.*

THINK BIG

Human machine system engineering is different from the more general and well known fields like human-computer interaction in that it focuses on complex, dynamic control systems that often are partially automated.

00

Analysis

Two blindspots.

5 YEAR

research endeavor

FEAR

of executing a multimodal scope

LIMITED

on resources

UNRESOURCEFUL

not leveraging internally

GEEKING OUT

on small wins

OBSERVATIONS
